

SUMMARY

Software engineer with **5+ years shipping production backend and native iOS features** (Swift, Objective-C, SwiftUI), specialising in scalable system architecture, REST API design, and full-stack product delivery in agile, fast-moving teams. Built an on-device CoreML/Vision iOS app reaching **80%+ real-world accuracy across 19 classes**, and I'm currently building a second SwiftUI app end-to-end. Comfortable owning ambiguous problems from architecture through release, and pairing that with a data-driven mindset from running GA4-based conversion and KPI experimentation for my own product. B.Sc. Computer Science, BHT Berlin.

TECHNICAL SKILLS

iOS & Applied ML	Swift, SwiftUI, UIKit, Objective-C, CoreML, CreateML, Vision Framework, Xcode, MVVM / Clean Swift, Sign in with Apple, on-device inference
Backend & Architecture	Node.js, Express.js, PostgreSQL, MySQL, MongoDB, Sequelize, REST APIs, OpenAPI/Swagger, microservices, Clean Architecture / DDD, Supabase
Cloud, CI/CD & Testing	Docker, AWS S3, Jenkins, CI/CD pipelines, Mocha, Chai, k6, Selenium, BrowserStack, Kibana monitoring
Data & Experimentation	Google Analytics 4, Search Console, A/B-style CRO experimentation, KPI tracking & iteration, product analytics
Frontend & Tooling	TypeScript, Next.js, Vue.js, Figma, Adobe XD, Git/GitLab, Scrum & Agile delivery

EXPERIENCE

Founder & Lead Engineer

Jan 2026 – Present

juliakas.de, Berlin (Remote)

- Independently founded and operate a D2C product business, owning technical decisions end-to-end: platform architecture, e-commerce build (WordPress, Stripe, PayPal, Google Pay) and infrastructure
- Run continuous, data-driven experimentation on GA4 and Search Console, iterating weekly on conversion, retention and engagement KPIs, a direct analogue to A/B-testing driven product decisions
- Currently building *Subconscious Studio*, a native SwiftUI iOS app (Sign in with Apple, Supabase backend, MVVM), applying the same architecture discipline used in production backend work

iOS & Backend Developer

Dec 2020 – Jan 2025

Nanocosmos GmbH — Interactive Streaming Platform, Remote

- Contributed native iOS features in Swift and Objective-C on a live interactive streaming product; integrated internal SDKs and debugged UI components in Xcode
- Built and maintained scalable backend services (Node.js, Express.js, PostgreSQL, Sequelize) for a high-performance streaming platform in a microservices environment
- Designed REST APIs and documented them in OpenAPI/Swagger; refactored legacy Sequelize queries for performance and long-term maintainability
- Extended CI/CD pipelines (Docker, Jenkins, AWS S3); monitored live systems and resolved bottlenecks via Kibana dashboards; tested with Mocha, Chai, k6, Selenium and BrowserStack
- Built internal APIs connecting to ActiveCampaign, automating marketing workflows and linking backend logic to customer journeys

IT & Marketing Strategist

Sep 2026 – Nov 2026

Rad-Börse — rad-börse.de, Remote

- Planned and delivered a complete WordPress + Hetzner website end-to-end, including technical SEO, GDPR compliance and Core Web Vitals performance optimisation
- Set up Google Analytics 4 and Search Console for data-driven, continuous conversion rate optimisation

SELECTED IOS PROJECTS

AI Artwork Guide — B.Sc. Thesis

Swift · SwiftUI · CoreML · Vision · MVVM

Native iOS app that identifies artworks on-device and surfaces curated info in real time for museum visitors, fully offline. Achieved **80%+ real-world classification accuracy across 19 artwork classes**.

github.com/juliaknzw/ai-artwork-guide-ios

Subconscious Studio

Aug 2026 – Present · SwiftUI · Supabase

Personal hypnosis app built in native Swift: Sign in with Apple authentication, a Supabase backend, and an in-progress audio player for a growing content library.

github.com/juliaknzw/subconscious-studio

EDUCATION

M.Eng. Print & Media Technology — BHT Berlin

2022 – 2025

B.Sc. Computer Science — BHT Berlin (University of Applied Sciences)

2017 – 2022

Thesis: AI Artwork Guide, an on-device CoreML/Vision iOS app for museum visitors (19 classes, 80%+ real-world accuracy)
